

Safe Working Load (kN) for Prop loaded 25mm Max. Eccentric and 1.5 Max. Out-of-Plumb.
Recommended safe working loads for Props where concentric loading cannot be guaranteed. When supporting timber bearers prop load may be limited by allowable stress in timber.

Safe Working Load (kN) for props loaded Concentrically and $1.5^{\circ}$ Max. Out-of-Plumb.
Recommended safe working loads for props supporting Metriform or similar formwork systems ensuring concentric loading. Also for timber bearers where fork heads are used to ensure concentric loading, but load on prop may be limited by allowable stress in timber.

Safe Working Load (kN) for props loaded Concentrically and Suitably Laced wi1
Recommended safe working loads for props laced in two directions, at right angles, extended inner tube (see sketch). The lacing and the formwork deck must be restrain by tying to the building or by diagonal bracing.
When using the loading tables, the height of any drop head or similar attachment height.
